World-leading transport company invests 180,000 EUR in ReadSoft's invoice automation solutions

One of the world's leading transport companies has selected ReadSoft as their supplier of choice for invoice automation. The solution involves the processing of over half a million invoices annually.

With a business system from SAP in place, this world-leading transport company already had good support for many of their business processes, but their accounts payable routines were still cumbersome and manual. ReadSoft's automated invoice handling solution for SAP was therefore a logical investment. The deal was made in the U.K. and the implementation will be carried out through a ReadSoft specialist partner.

ReadSoft's solution will enable the company to automatically digitize incoming invoices, match the information against data in SAP to make sure it is correct, and approve the invoices in an electronic workflow. This will make accounts payable routines faster and less labor-intensive. The solution also includes extensive monitoring capabilities giving the company better control of their invoice flow.

"Multinational companies are one of our focus areas, and our solutions are well suited for handling the extensive requirements of such organizations," comments Jan Andersson, CEO at ReadSoft. "Invoice processing in SAP is an area where we are very strong and this order is yet another proof of that. We are certain that this customer will get solid business value and substantially improved accounts payable processes in the years to come."
